

Presents

HACKATHON @ CONNECTIONS

IIESoc have been working behind the scenes for Connections 2017 - a Pre-IETF forum to get protocol developers, academicians and network operators together on the same platform. As part of the event we also have a Hackathon to encourage developers to collaborate and develop utilities, ideas, running code and solutions that show practical implementations of IETF standards.

A pre-IETF India Forum.

November 8-9, 2017

This is also an excellent mechanism to participate in IETF by bringing in the implementation experience and providing useful comments to in-progress standards.

Use this opportunity to showcase your work related to Internet of Things (IoT), Software Defined Networks (SDN), Applications and Security. Don't miss out an opportunity to discuss your work with experienced IETFers and networking professionals from India and abroad.

Add your project in GitHub at <https://github.com/iiesoc/hackathon>
